- Creator of Luso Action Canvas for Practical AI Regulation Learning
- Author: "Compliance Is Not the Destination" (SSRN)

Lumo AI
Compliance & Advisory

The EU market-entry hack nobody tells you about

Timeline Milestone

1993

Officially Live

For over three decades, setting the standard for product entry into the European single market.

When the letters **‘CE’** appear, it means that products sold in the EEA have been assessed to meet high safety, health, and environmental protection requirements.

The EU market-entry hack nobody tells you about

TIMELINE MILESTONE

2024

Officially Live

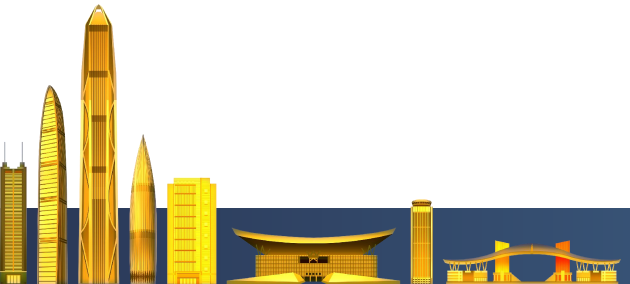

The landmark framework officially setting the standard for artificial intelligence regulatory compliance in Europe.

The EU AI Act touches **AI solution in EU, Sold in EU or when the results processed are used in EU**

CORE PRINCIPLE

"prove it once, use everywhere"

Why market entry gets harder with agents?

MOST COMPANIES

Market entry is a **decision**.

Planned, deliberate, and gated. Expansion requires formal evaluations, legal sign-offs, and conscious executive choice.

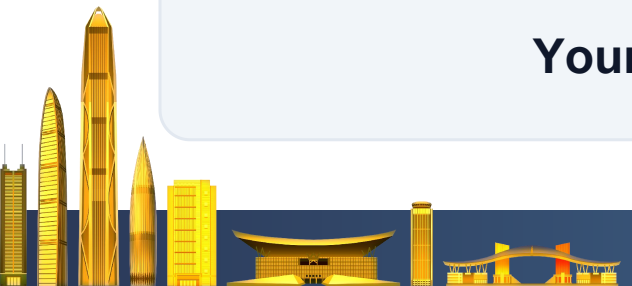

AGENTIC AI COMPANIES

Market entry can be an **accident**.

Autonomous, immediate, and continuous. AI agents act, transact, and engage across jurisdictions without waiting for permission.

When software acts autonomously, market presence is defined by action, not intention.

Your agent doesn't wait for a market-entry decision. It just enters.

The Shrimp Sandwich Problem

The Shrimp Sandwich Problem

THE ASSUMPTION

“My AI product is good enough. It'll slide right into Europe.”

The Shrimp Sandwich Problem

THE REALITY

I have bad news.

Europe does not serve shrimp sandwiches at the border.

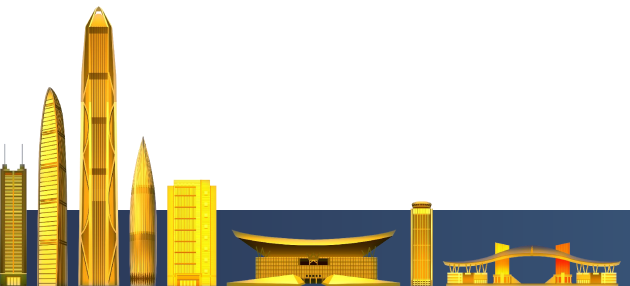

The Shrimp Sandwich Problem

The question that actually matters is this:

KEY QUESTION

“Given what you've already built, what has to change before you can credibly take it into Europe?”

PILLAR 01

01 MARKET

ENTRY ROUTE

Which route in, and what legal role does it hand you?

STRATEGIC SCOPE

Assess your company, your AI solution, your target customers

PILLAR 02

02 PRODUCT

SYSTEM DEFINITION

What is the product / AI System / AI Solution?

Describe it with precision, not with a pitch deck.

USE CASE SCOPE

Can we describe, in one page, exactly what we're bringing in and how it's meant to be used?

PILLAR 03

03 EXPOSURE

OBLIGATION SCOPE

Which obligations does that description actually trigger?

Describe it with precision, not with a pitch deck.

EXPOSURE BOUNDARIES

Do we know which obligations that description triggers and which it doesn't?

PILLAR 04

04

GAP

OBLIGATION SCOPE

Where are we today versus where Europe requires us to be?

GAP IDENTIFICATION

Do we know, concretely, where we fall short of what Europe requires?

PILLAR 05

05 READINESS

RESOURCE ALLOCATION

Do we have a resourced plan to close that gap, not just an awareness it exists?

Move beyond gap identification to actionable, funded execution strategy.

EXECUTION READINESS

Are dedicated teams, budget, and operational capabilities committed to delivery?

PILLAR 06

06

ENTRY

TIMELINE DEFENSIBILITY

Do we have a timeline we'd be comfortable defending to a regulator?

STARTING POINT

If any answer is "no" or "not sure"
That's your actual starting point.

The starting point is NOT the regulation book

The Lumo Compass Framework

01

MARKET

02

PRODUCT

03

EXPOSURE

04

GAP

05

READINESS

06

ENTRY

5 of these 6 are just good market-entry strategy. Only one is paperwork.

With me, Without me

WITH ME , AI Regulation

Customer in EU

√ **Establishes Trust**

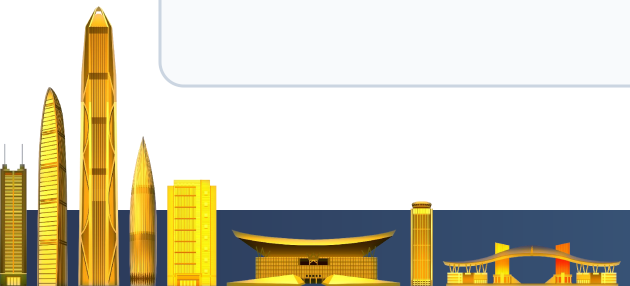

√ **Key Product Differentiator**

WITHOUT ME, AI Regulation

Dealing with Rogue AI

Ungoverned agent activity creates immediate regulatory exposure, non-compliance, and legal liability.

The only difference: you answered the Lumo Compass questions

CORE INSIGHT

Compliance is not the destination.

Market readiness is.
